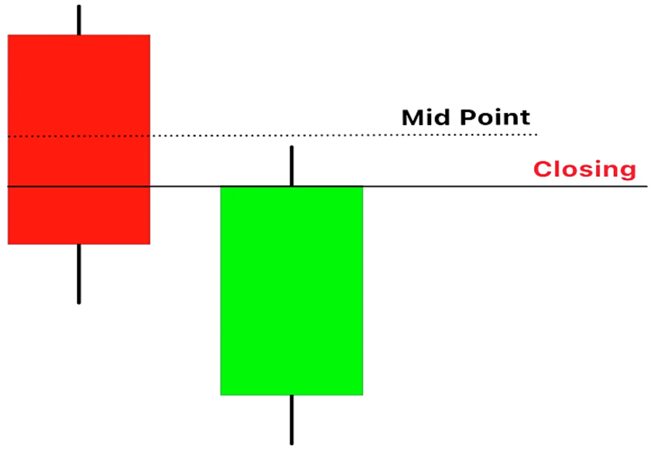
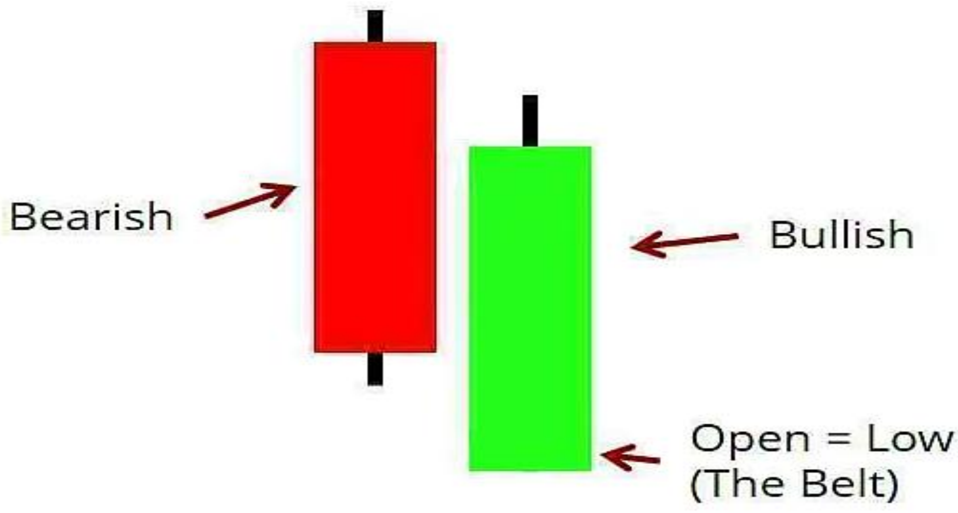
BEARISH THRUSTING

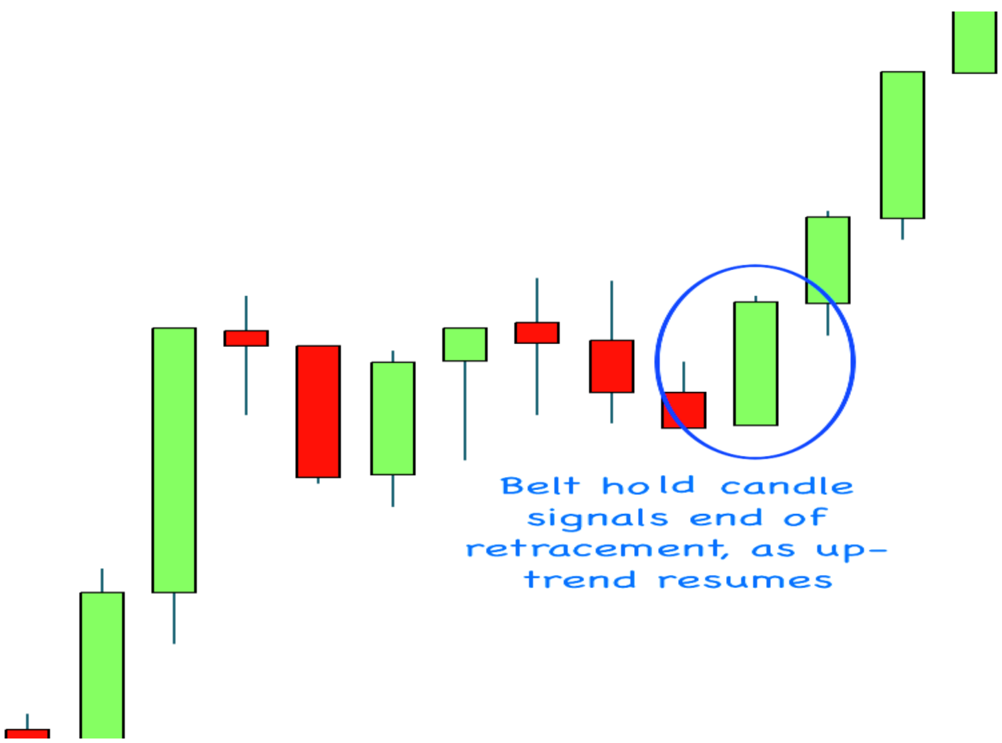


It is formed when a long Red (bottom) candle is followed by a Green (top) candle. The Green candle closes above the close of the Red candle, but it does not close above the midpoint of the actual body of the Red candle. The thrusting pattern is generally considered to be bearish.

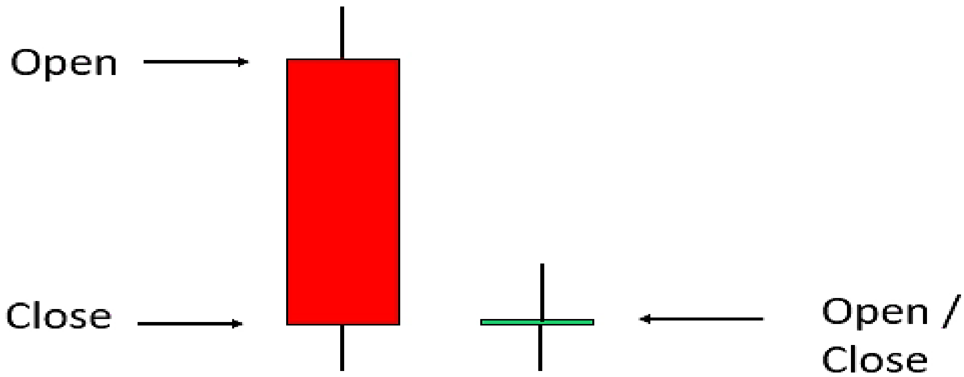
BULLISH BELT HOLT



The bullish belt hold is a one-day Japanese candlestick pattern that suggests a possible reversal of the prevailing downtrend. The pattern is formed when after an extension of bearish trading, there is a bullish or green candle stick.

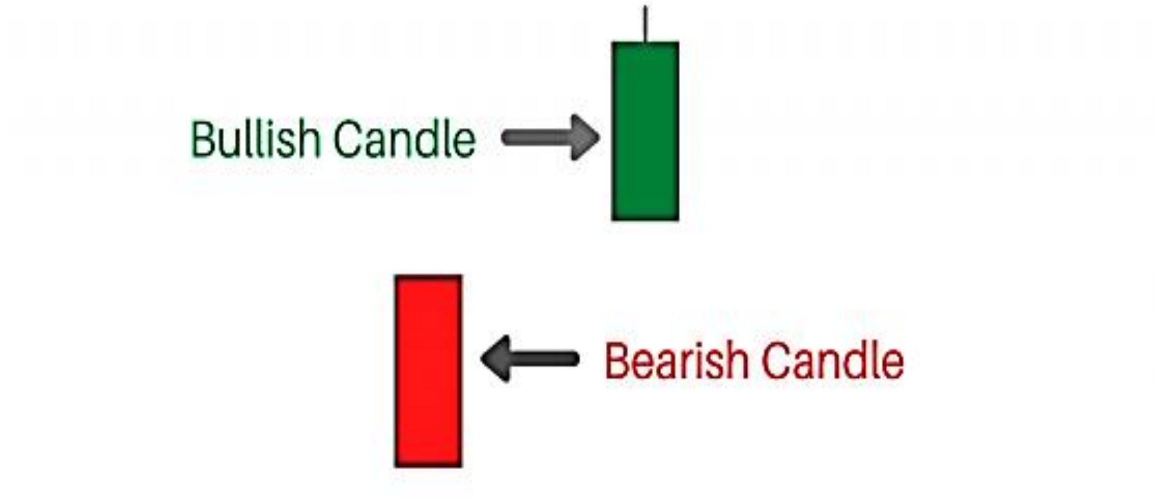


BULLISH HARAMI CROSS



A rapid harami cross is a large downward candle followed by a doji. This occurs during the fall. The rapid defeat of the cross is confirmed by an increase in the price following the pattern. A recession harami cross is a large candle followed by a doji.

BULLISH KICKER



bullish kicker pattern indicates that the stock prices could be on the rise. Such an arrangement can be seen below: As shown, a bullish kicker pattern starts with a black (bearish) candlestick, which is then followed by a white (bullish) candlestick that opens above the black candlestick, creating a large upward gap.

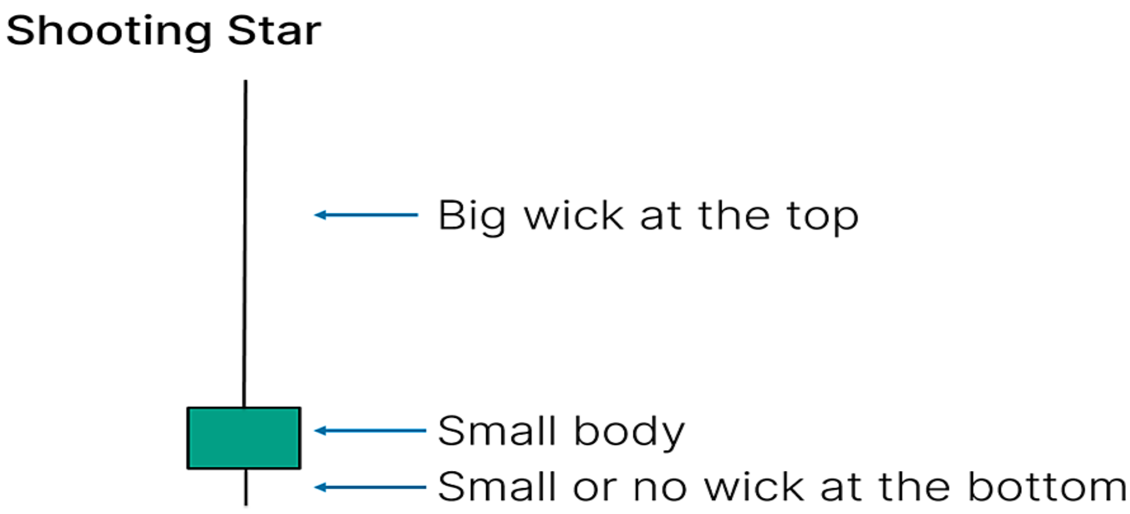
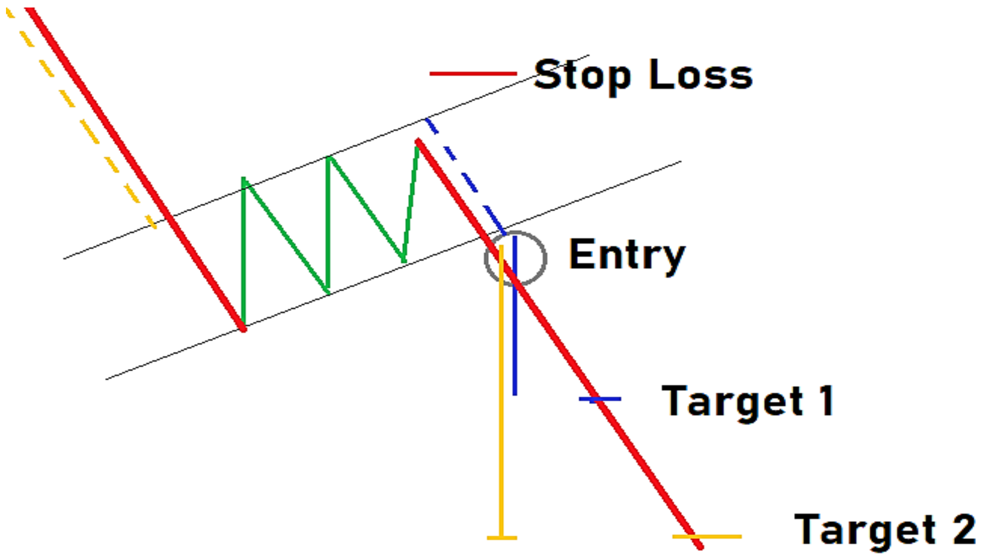
SHOOTING STAR

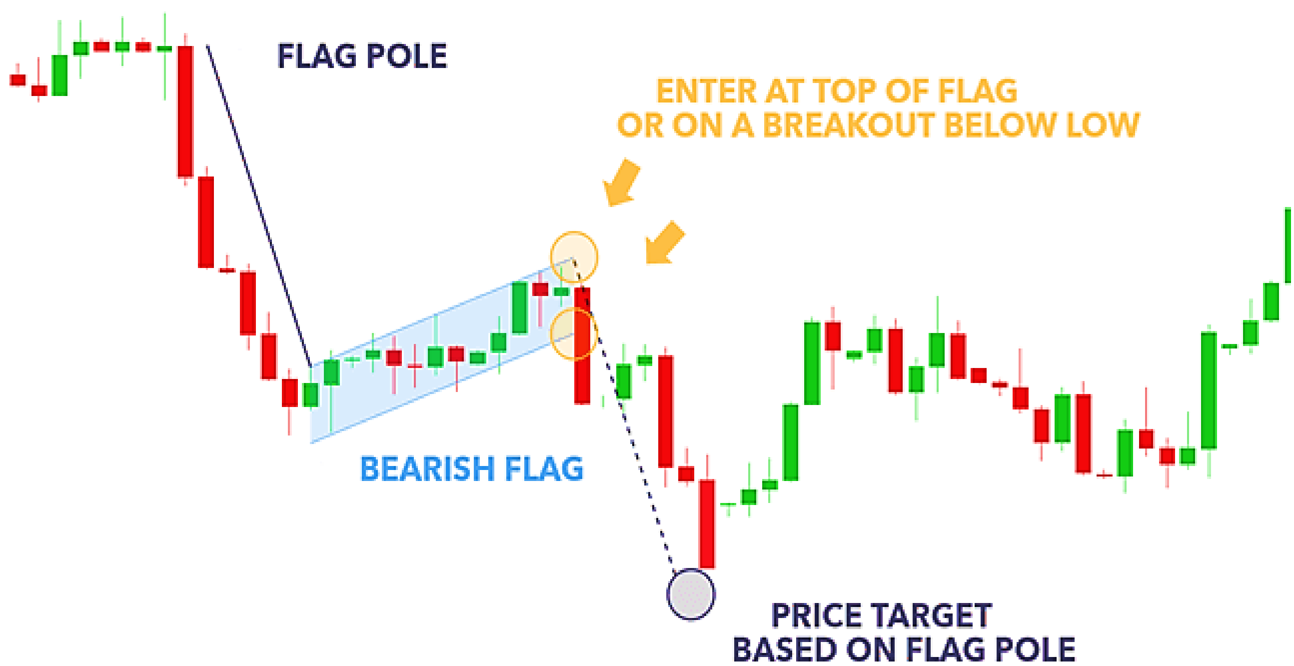


The shooting star candle is a bearish trend reversal candle, which converts a stock that is running in an uptrend into a downtrend. In this candle, the lower shadow is very small or not, but the upper shadow is more than twice the size of the body. The color of this candle is red, then the candle is more effective.

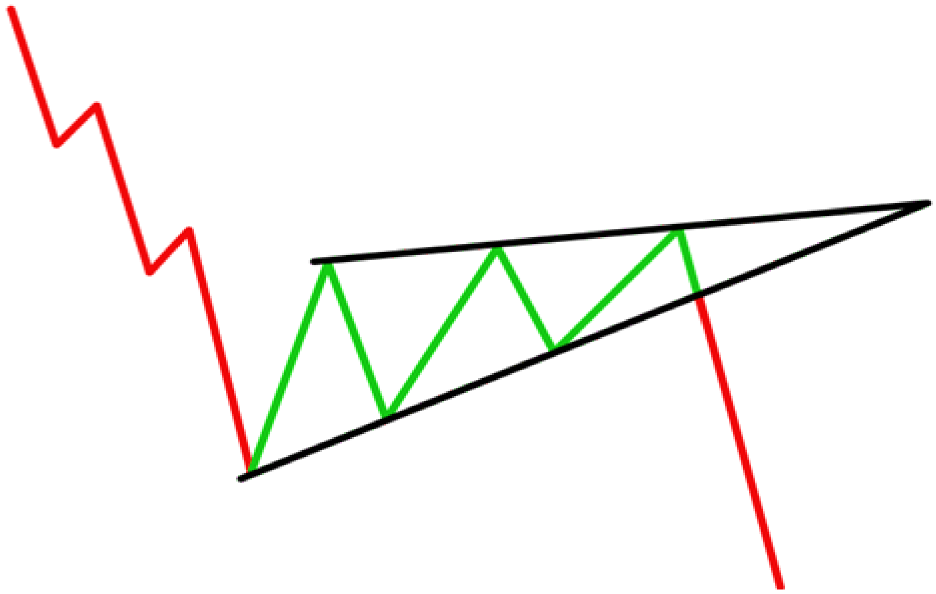
BEARISH FLAG



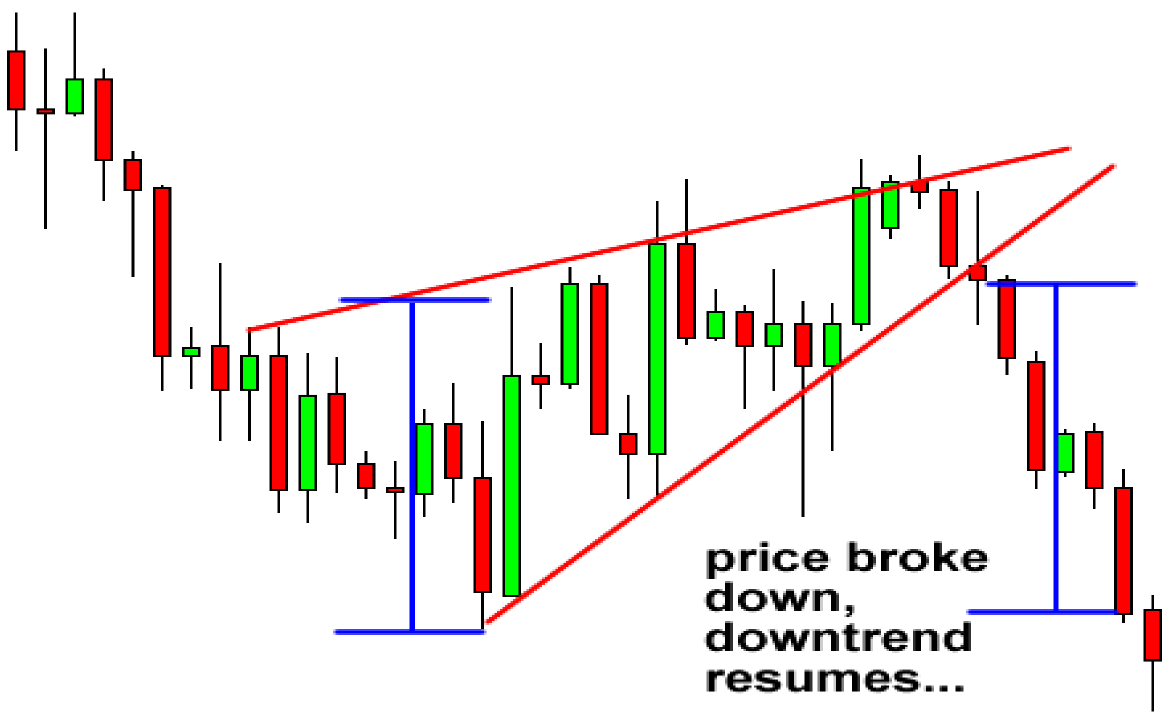
bearish flag is a candlestick chart pattern that signals the extension of the downtrend once the temporary pause is finished. As a continuation pattern, the bear flag helps sellers to push the price action further lower.



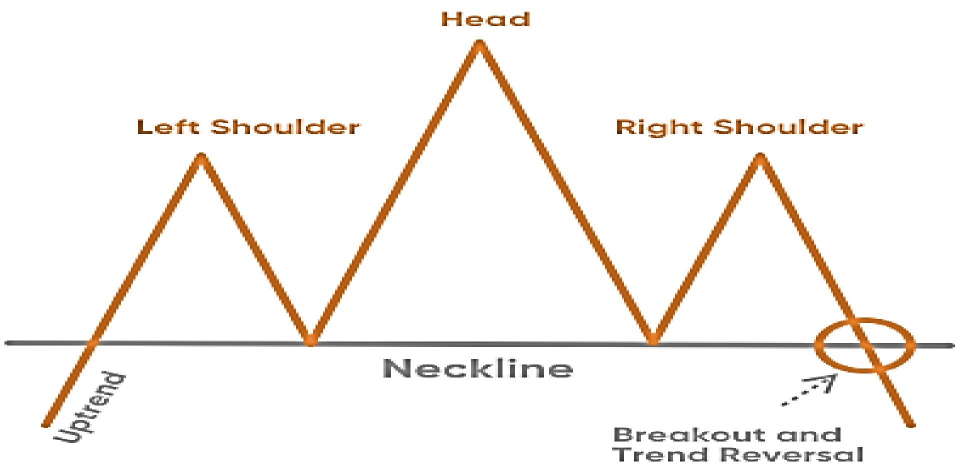
RISING WEDGE



Rising wedges are a reversal pattern. These patterns tell you that the current trend is going to end, the second trend will start. About the wedge pattern, it is believed that it is formed when the top or bottom of any trend is formed i.e. the trend is complete. Trading activity in this type of formation is very limited. The rising wedge pattern is like a triangle and the top and bottom lines are like a slope.



HEAD AND SHOULDERS



When a stock takes the support of one support level and forms three such peaks in which the first top and the third top are almost at the same level but the second top is slightly higher, then it is called the head and shoulder pattern or Head and Shoulders Pattern.

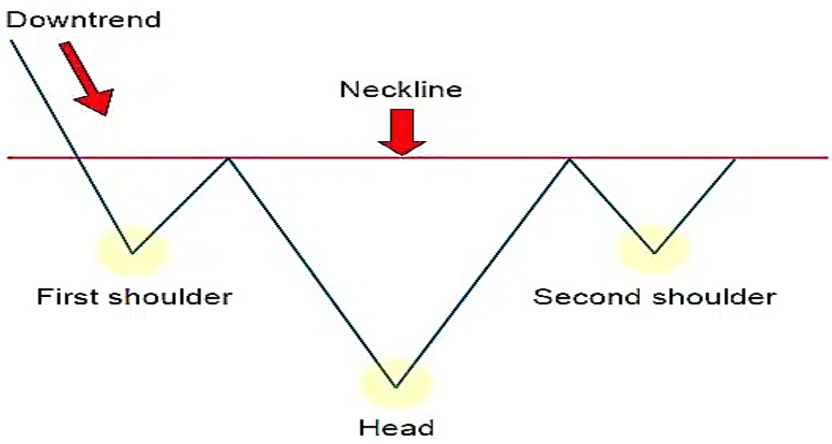
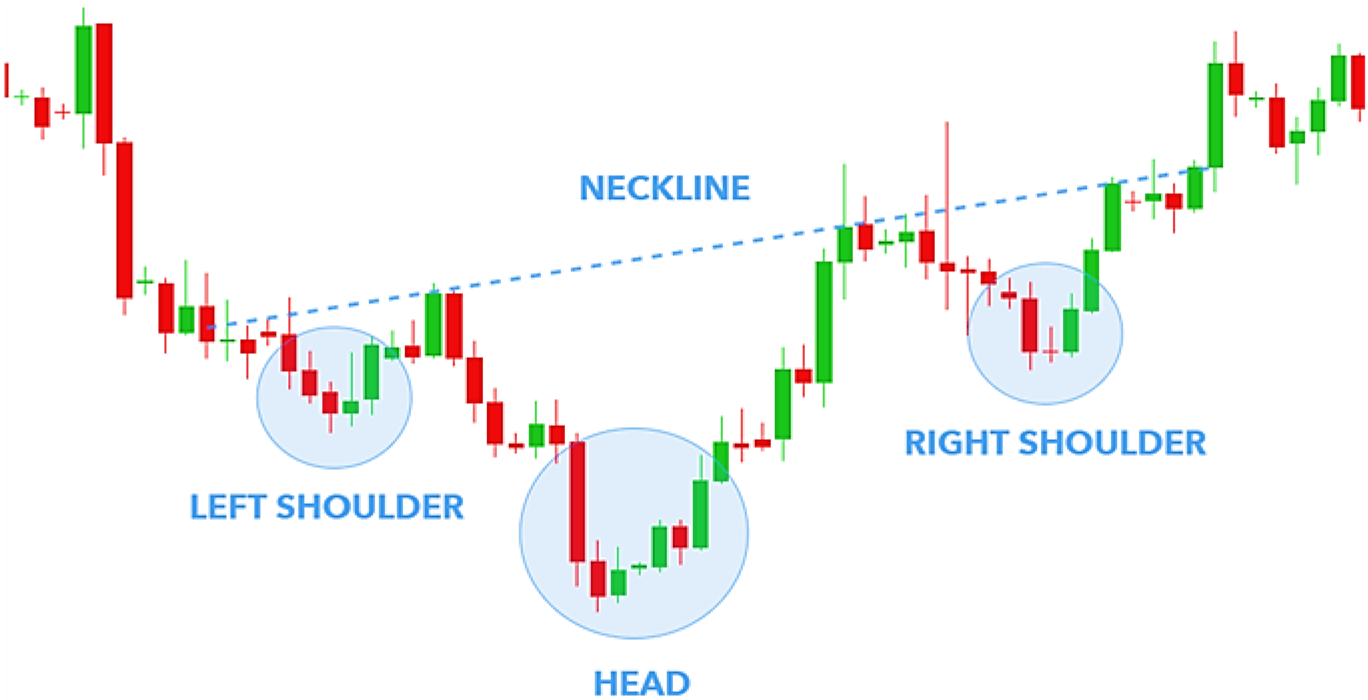
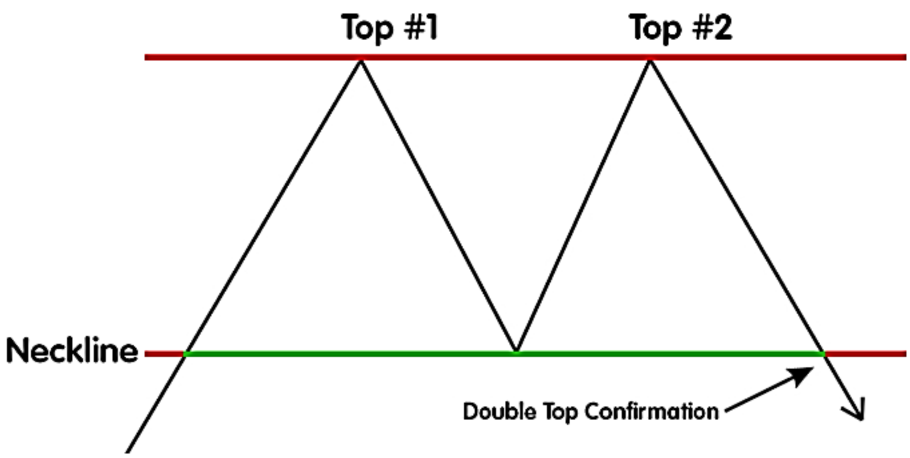
INVERTED HEAD AND SHOULDERS



The price of a stock is falling down and after taking the first support, it takes the resistance and then falls down and breaks the support and takes a little down support and then comes up and takes the resistance and falls down again and it starts to rise back up from the earlier support As shown in the image above, this is called the inverted head and shoulders chart pattern. As soon as you break the resistance, you have to take the entry and your stop loss will be of the third support and your target will be 1:2.



DOUBLE TOP



A double top is an extremely bearish technical reversal pattern that forms after an asset reaches a high price two consecutive times with a moderate decline between the two highs. It is confirmed once the asset's price falls below a support level equal to the low between the two prior highs.
